

```
void TextBox::setString(std::string nstring) {  
    sf::String val{nstring};  
    tbox.setString(val.toWideString()); // allow wider characters like japanese characters  
                                         // for future language expansion  
}
```
