# Chapter 1

## General Overview

- I want a text editor similar to vim

### 1.1 Features

- modal
  - **Command** mode, Insert mode
- show lines at side of window
- Input and delete text
  - use backspace and hjkl to move through text
- working cursor
  - change colour
- undo using commands
- Save file
- move using mouse

### 1.2 Order i should implement things

- Make window
- section window in two for lines and text box
- add cursor to text box side

## 1.3 Structure

Kamil.cpp - Main window (text window is used) -Window (has the text box window and the line number) -inputs (handles events like keyboard clicks and mouse events, state changes happen here) -textdoc (handles the file like saving it)

window

- Main Window Editor
- Where text is handled (same size as window)
- Rectangle on left for margin
- font
- line info
- drawn on main window Input
- mouse and keyboard window TextDocument
